## FIREBASE - Iniciando um Projeto

# FIREBASE – Iniciando Projeto Firebase Database

# Finalizada a criação do Firebase Database

## FIREBASE – Iniciando Firebase Authentication

# Finalizado a configuração para habilitar a autenticação

# Para Adicionar / Consultar usuários cadastrados

# Para configurar recuperação de senha

# Para Visualizar as Configurações do Projeto

#### Outra maneira de Adicionar o Firebase ao seu aplicativo

# Roteiro para Configurar Projeto RN com Firebase

#### A. Documentação Expo Firebase

Configurando Firebase Expo - <a href="https://docs.expo.dev/guides/using-firebase/">https://docs.expo.dev/guides/using-firebase/</a>

#### B. Configuração do Ambiente

- 1. Install the SDK: npx expo install firebase
- 2. Inicialize o SDK no seu projeto Copiar a configuração do projeto criado no firebase como no exemplo abaixo e colar no arquivo **firebaseConfig.js**:

```
import { initializeApp } from "firebase/app";
import { initializeAuth, getReactNativePersistence } from "firebase/auth"

// Exemplo da Configuração
const firebaseConfig = {
    apiKey: "AIzaSyD-6J_V9Y4V4Wm6s6fizskL5tY43MLLsVo",
    authDomain: "devcurso-6ddf9.firebaseapp.com",
    projectId: "devcurso-6ddf9",
    storageBucket: "devcurso-6ddf9.appspot.com",
    messagingSenderId: "17665490376",
    appId: "1:17665490376:web:e19fb6de9871daba1694fd"
};

// Initialize Firebase
const app = initializeApp(firebaseConfig);
const auth = initializeAuth(app)
export { auth };
```

- 3. Configure o arquivo Metro:
  - a. Para criar o arquivo: npx expo customize metro.config.js
  - b. Atualize o arquivo criado:

```
// Learn more https://docs.expo.io/guides/customizing-metro
const { getDefaultConfig } = require('expo/metro-config');

/** @type {import('expo/metro-config').MetroConfig} */
const config = getDefaultConfig(__dirname);
config.resolver.sourceExts.push('cjs');

module.exports = config;
```
